

Wrist Rotators for Adult Hands

Electric Wrist Rotators:

The Electric Wrist Rotator from Motion Control has been modified for use with the LTI Boston Digital™ Arm System. This Wrist Rotator can also be used with any other 50 mm straight forearm. This wrist rotator is preferred over competitive rotators because of its superior performance. It delivers more torque and greater speed making it much more functional. LTI will specify the required cables and integrate the wrist rotator into the prosthesis.
